Importing Necessary Libraries

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
%matplotlib inline
import seaborn as sns
import warnings
warnings.filterwarnings('ignore')
```

Loading the dataset

```
titanic = sns.load_dataset('titanic')
```

```
titanic.info()
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 891 entries, 0 to 890
Data columns (total 15 columns):
 #   Column       Non-Null Count  Dtype
---  ------       --------------  -----
 0   survived     891 non-null    int64
 1   pclass       891 non-null    int64
 2   sex          891 non-null    object
 3   age          714 non-null    float64
 4   sibsp        891 non-null    int64
 5   parch        891 non-null    int64
 6   fare         891 non-null    float64

```
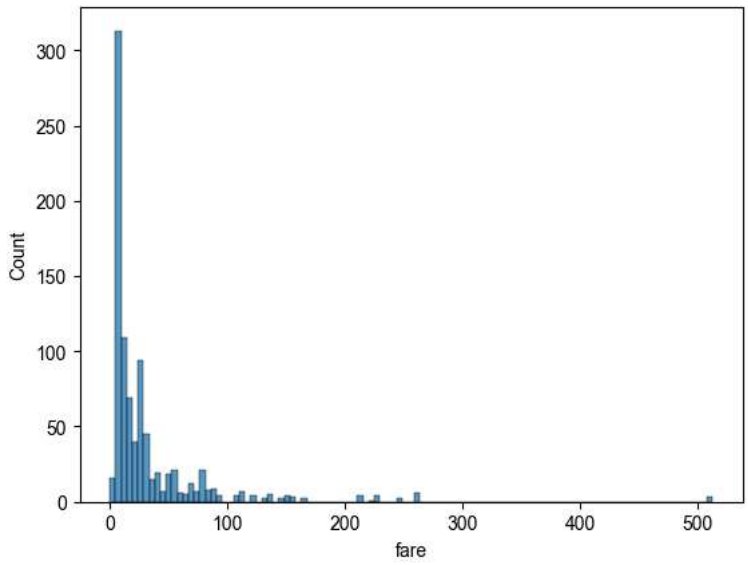
titanic.shape
```

```
(891, 15)
```

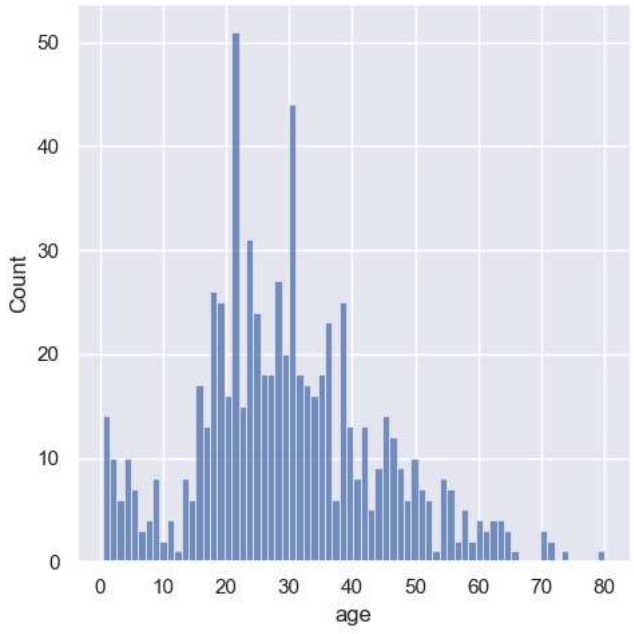
Data Visualization

```
sns.histplot(x='fare',data=titanic)
sns.set(rc={'figure.figsize':(5,5)})
```



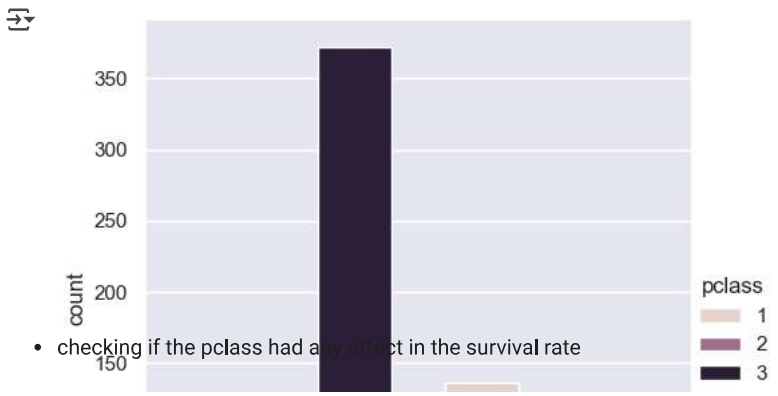
- This histogram shows how the price of the ticket for each passenger is distributed

```
sns.displot(x='age',data=titanic,bins=70)
sns.set(rc={'figure.figsize':(5,5)})
```



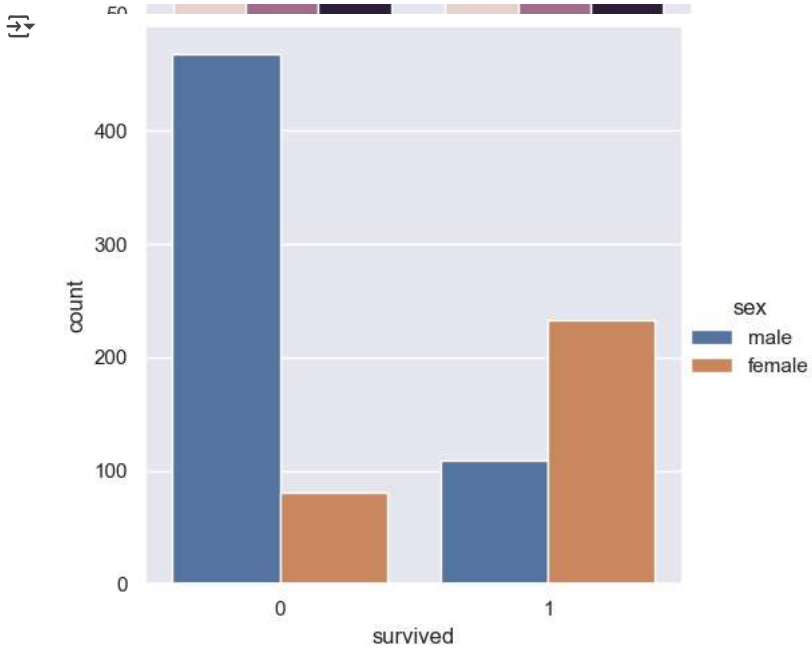
- This histogram shows how the age of each passenger is distributed in the ship

```
sns.catplot(x='survived', data=titanic, kind='count', hue='pclass')
sns.set(rc={'figure.figsize':(5,5)})
```



- checking if the pclass had any effect in the survival rate

```
sns.catplot(x='survived', data=titanic, kind='count', hue='sex')
sns.set(rc={'figure.figsize':(5,5)})
```



- checking if the sex of passengers had any effect in the survival rate
